CATALOGUE

OF

HOT-HOUSE, GREEN-HOUSE,
HARDY, AND HERBACEOUS PLANTS;
FLOWERING AND EVERGREEN SHRUBS,
FRUIT AND FOREST TREES,

ALPHABETICALLY ARRANGED,

ACCORDING TO THE LINNÆAN SYSTEM.

By DICKSONS & Co.

NURSERYMEN, SEEDSMEN, AND FLORISTS,
EDINBURGH.

PRINTED IN 1794.

P R E F A C E.

Then spring the living herbs profusely wild,
O'er all the deep-green earth, beyond the power
Of Botanist to number up their tribes.

Thomson's SEASONS.

THE vast improvements Gardening in general has received of late from the Science of Botany, induced us to lay the following sheets before the public.

The method of arranging the names is somewhat different from that usually followed in such catalogues, viz. placing them in four different classes, according to their situation in the British gardens. On consulting performances of this kind, confusion and superfluity appear very conspicuous: to prevent irregularities of this nature, we have arranged all the Genera in alphabetical order, in manner of the Linnæan index, with signatures, pointing out the situation, duration, class, and order of each plant. To render the whole as complete as possible, we have inserted a translation, in English, of the outlines of Linnæus's system of vegetables. The numbers opposite each Genus in the catalogue point out, by the assistance of the annexed key or table, the proper class and order to which each plant belongs.

Linnæus, with great propriety, says, Nature has put no limits between trees and shrubs ; besides, every thing respecting dimensions is so variable in its nature, and depends so much on the difference of climate, soil, and management that, were a standard of this kind attempted to be established, the greatest confusion would ensue, and the same plant in different countries, and even in opposite soils in the same country, would receive different appellations according as it exceeded or came short of the given standard. Thus, the *Ricinus Palma Christi*, *Arbutus*, *Rhododendron*, and several others which grow to the size of very large trees in warm climates, are in this country equalled and even exceeded in height by many of our smallest shrubs. He has therefore divided the duration of the vegetable kingdom in the following manner :——1. Annual Plants, 2. Biennial, 3. Perennial, 4. Shrubs and Trees ; this division we have followed, by affixing the Linnæan character to each species.

This, it is imagined, will prove of great advantage in consulting the catalogue, and will convey all the information necessary to those who have occasion to peruse it, whether engaged in agriculture or gardening, &c. either from motives of amusement or profit.

For the conveniency of those to whom Botanical names might not be so familiar, we have added an index in English at the end of the Catalogue, referring to the page where the different species and varieties are to be found.

To accommodate the Nobility, Ladies, and Gentlemen who are curious in their fruits, not merely for the ornament of a desert, but for the more substantial pleasure of having them well flavoured, we have for many years been particularly attentive in selecting varieties of fruit trees, both at home and abroad, to supply those who are particular, with such sorts as may be most agreeable to their palate, or best suit our climate.

We

P R E F A C E.

We have published a Catalogue of the names of fruit trees, kitchen garden, and annual seeds, &c. which may either accompany the Botanical Catalogue or not. We hope, in a year or two, to give the public a Descriptive Catalogue of the various fruits, with their qualities, flavours, and time of ripening, which the uncertainty of the seasons in this climate makes so difficult to ascertain, and frequently causes so much disappointment.

The Bulbous Roots are not all included in this Catalogue, because fresh varieties of Hyacinths and other curious sorts are every year imported from Holland, France, Italy, and the Cape of Good Hope, which are inserted in a separate Catalogue, printed annually.

We by no means pretend to be in possession of all the plants mentioned in this Catalogue; perhaps no Botanic Garden in Europe can boast of such a treasure. Our intention was to make a Catalogue of real use to the lovers of gardening, agriculture, &c. and to exhibit a list of such plants as are at present to be found in the British Gardens: notwithstanding, we are determined to increase our collection, and make it as complete as possible, to supply the demands of the public.

The Publishers will spare neither trouble nor expence to procure all useful and ornamental plants, seeds, gardening, or labouring implements, &c. to satisfy the demands of those who may be pleased to entrust them with the execution of their orders.

Polyandria	Many Stamens.

Polygamia Æqualis. All the Floscules perfect, and the whole flower regular.

Polygamia Superflua. Perfect Floscules in the Disk. Pistilliferous. Floscules in the Ray, both producing seed.

Polygamia Frustranea. Floscules in the Disk perfect, and producing seed, in the Ray imperfect, and without seed.

POLYGAMIA.

System of LINNAEUS.

POLYGAMIA NECESSARIA. Floscules in appearance, perfect in the disk, producing no seed. Pistilliferous floscules in the ray, producing seed.

POLYGAMIA SEGREGATA. Many floriferous Calyxes contained in one common Calyx, and forming one flower.

MONOGAMIA. Flowers not compound as in the other orders, but simple as in all the other classes.

MONOECIA. Perfect and imperfect flowers on the same plant.

DIOECIA. Perfect flowers on one plant, and imperfect on another.

TRIOECIA. Perfect flowers in one plant, and staminiferous flowers on a second, and pistilliferous flowers on a third.

FILICES. Ferns bearing seed on the back of the leaf.

MUSCI. Mosses : having imperfect flowers distinct, and the seeds in a capful often covered with a veil.

ALGAE. Having imperfect flowers distinct, and the seeds either like a meal on the leaf, or inclosed in bladders.
